OreSat0

=====

+ Oregon's first satellite, also known as OreSat0, was launched into low Earth orbit on March 15 aboard Astra's "LV0009" rocket from Kodiak, Alaska. OreSat0 was designed and built by the Portland State Aerospace Society (PSAS), an interdisciplinary student group at Portland State University. It's the first in a series of three satellites. It carries an Amateur Radio communications system. PSAS already has close to 200 data packets from the satellite as it circles the Earth and is working better than anticipated. Experiments will begin shortly allowing PSAS to test their sensors and systems over the next few years until OreSat0 makes its journey home. In the meantime, PSAS is already building its next satellite, OreSat0.5, which is equipped with a better camera to guide its journey later this summer. More information at <https://www.pdx.edu/news/oregons-first-satellite-launched-orbit>.

[ANS thanks Portland State University for the above information.]
