+ A new Indian rocket successfully delivered three satellites to orbit on Thursday, Feb. 9[10], including Janus-1, which was built by the Indian-American company Antaris, is a technology-demonstrating "smart satellite," according to the ISRO mission description. Like its predecessor, AzaadiSAT-2 was built by hundreds of female students from across India. AzaadiSAT-2 "aims to demonstrate LoRa and amateur radio communication capabilities, measure radiation levels in space and demonstrate expandable satellite structure, etc," ISRO officials wrote. (ANS thanks Space.com for the above information)
